

Where Should Your Survey Run?

Three simple options — pick the one that fits your team.

Your survey app runs on a computer that is switched on. **Where** it runs decides **who can answer** and **when**. Here are your three choices.

Option 1 — Run it on the HR / admin PC

Simplest. Free. Good for a quick one-off.

What happens: HR emails the link. Staff can answer only while the HR PC is switched on and on the office network.

If the HR PC is off or asleep: the link stops working — staff see an error and their answer is not saved. They must try again when the PC is back on.

Who can answer: only staff inside the office (on the office Wi-Fi).

Cost: Free.

Best if: a short survey, HR keeps the PC on for a few days, and everyone is in the office.

Watch out: depends on one PC staying on; no one outside the office can answer.

Option 2 — Run it on the company server

Internal. Free. Always on. IT sets it up once.

What happens: the app runs on the company's always-on server. HR emails the link; staff can answer any time — the server never sleeps. HR's own PC can be off, it doesn't matter.

Who can answer: staff inside the office / on the company network (or the company's remote-work connection, if you have one).

Cost: Free (uses your existing server).

Your data: stays 100% inside the company.

Best if: all staff are office-based and you want it always available and fully internal, with no monthly cost.

Watch out: a staff member genuinely outside, with no company connection, still can't reach it.

Option 3 — Put it online with Microsoft Azure (the cloud)

Works for everyone, everywhere. Small monthly cost.

What happens: the app is published once to Microsoft Azure (your own Microsoft cloud). HR emails the link; anyone can open and answer it from anywhere, any time — office, home, traveling, on a phone. Nothing needs switching on.

Who can answer: everyone, no office network needed.

Cost: a small monthly fee (a few dollars, on your existing Microsoft billing).

Your data: stored in your own Microsoft cloud.

Setup: a one-time job by IT (or by us). After that, HR just opens a web link — nothing installed on the HR PC.

Best if: any staff are ever out of the office (meetings, travel, working from home) and need to answer from anywhere.

Option	Always available?	Who can answer	Cost
1. HR PC	Only while that PC is on	Office only	Free
2. Company server	Yes	Office (or company remote connection)	Free
3. Azure (online)	Yes	Everyone, anywhere	Small monthly

How to choose, in one line: if everyone is always in the office → **Option 2**. If staff are ever out and about → **Option 3**. Use **Option 1** only for a quick test.
